PVC Duct
Fittings and
Specifications

VIRON®
INTERNATIONAL
CORPORATION

989-723-8255

**Complete System Solutions for
Moving Corrosive Air**

www.vironintl.com

VIRON® has grown to become a leader in designing and manufacturing Corrosion Resistant Air Scrubbers, Fans, and Exhaust Duct. Our personnel consists of a sales staff and application engineers who are well known and highly regarded in the industry. Many of our duct products hold manufacturing certificates, including low flame/smoke "Viro-Duc®" certified by Factory Mutual, a highly corrosion resistant duct certified by the ICBO, and a PVC fume exhaust duct "VI-A-DUC®" certified by Factory Mutual.

When you buy from **VIRON®**, you are buying a proven, field tested product from a company with over thirty (30) years of manufacturing expertise.

VIRON® is sincerely interested in working with your engineers to solve your exhaust and scrubber corrosion problems.

CAPACITY - **VIRON**'s 40,000 square feet Manufacturing Facility can produce over a half million pounds of PVC duct and fittings annually. The company consistently fabricates duct and complete duct systems for many applications where corrosion is a major problem.

EXPERIENCE - **VIRON®** has been in business for over thirty (30) years. All of this experience has been as manufacturers of Corrosion Resistant Plastic Duct. Our management team has over 160 years of combined experience working at **VIRON®** alone. Our experience is unparalleled in this industry, and that experience will pay dividends on your projects.

DESIGN - **VIRON®** utilizes Intergraph Computer Assisted Drafting and Design (CADD) equipment. This leading edge technology is compatible with most major engineering houses, where workstation machines are the standard. We can interface with our smallest client to our largest.

MANUFACTURING - **VIRON®** manufactures its duct to rigid quality standards. Through the use of our computer controlled butt welding and bending machines, we can manufacture to exact material thicknesses and dimensional data.

DELIVERY - Our customers are NUMBER ONE. We have made the commitment to react to every customer's delivery needs. This commitment has allowed **VIRON®** to maintain a constant flow of repeat business. Our customers know if they need the delivery, we will accommodate them.

QUALITY - Quality is the cornerstone of **VIRON**'s philosophy. "FQ" First Quality is **VIRON**'s commitment to our customers, which has led us into a dominant industry position today and into the 21st century.

PVC FUME EXHAUST DUCT

Approved

VIRON® uses "PVC" sheet in its *FM Approved* fume duct. The PVC Sheet systems have been pre-Approved by FM for use as a basic component in the manufacture of Fume Exhaust Ducts installed without internal fire sprinklers.

VIRON® has been approved by Factory Mutual Research Corporation as a manufacturer of PVC "Fume Exhaust Duct". The material was also tested in accordance with ASTM E-84:

Flame Spread Rating	14
Smoke Development Rating	754

30 DEGREE DOUBLE REDUCING WYE

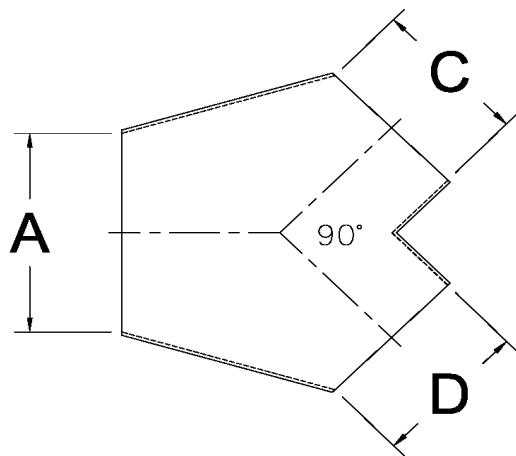

NOTE 1) A.S. MEANS ANY SIZE LESS THAN A

2) D IS GREATER THAN, LESS THAN, OR EQUAL TO E

3) L EQUALS [5(A-C)] OR (2D + 12") WHICHEVER IS LONGER

FLANGED END

PLAIN END

BELL & SPIGOT END

VIRON® manufactures all PVC duct and fittings with plain ends as shown in the middle illustration above. Both flanged and bell and spigot ends are available upon request. Please consult your local representative for further details.

—GENERAL NOTES—

As in all catalogs, we are making certain assumptions in order to come up with standard fittings. Listed below are some notes which may help clarify some common misconceptions:

1. **VIRON®** can manufacture rectangular duct, see pages 46 through 49. Consult your local representative for pricing and availability.
2. Standard elbows are manufactured with a centerline radius 1.5 times the diameter. However, **VIRON®** can manufacture any radius length to meet your requirements. Consult your local representative.
3. Reducers are manufactured with a standard length (large diameter - small diameter) times (5). Custom lengths are available from the factory. Consult your local representative.
4. All **VIRON® VI-A-DUC®** PVC duct is custom manufactured for each individual project. In order to maximize the corrosion resistance for these projects, we can help you specify the right material for your application. Contact our application engineers for valuable input to your corrosion problems.
5. All **VIRON® VI-A-DUC®** PVC duct is manufactured per SMACNA Standards. The pressure and vacuum ratings for this standard duct are shown on page 27. If your project requires an increase of either pressure or vacuum, **VIRON®** can design the duct and fittings to meet your requirements.

"VI-A-DUC®"

SPECIFICATION FOR RIGID POLYVINYL CHLORIDE (PVC) DUCTWORK WITH FM APPROVAL

1.0 SCOPE

This section specifies Polyvinyl Chloride (PVC) ductwork for conveying air, or a mixture of air and other gases and acids.

2.0 DESCRIPTION OF SYSTEMS

Ductwork shall be fabricated and installed under this section for the following systems:

- 2.1 All exhaust ventilation ductwork from the point of connection on the tank hoods to the entering side of scrubbers, air washers, or exhaust fans.
- 2.2 All discharge stacks from scrubbers, air washers, or exhaust fans.
- 2.3 Design Pressure: 6 inches W. C., negative, for exhaust ductwork
4 inches W. C., positive, for push air ductwork

3.0 QUALITY ASSURANCE

- 3.1 Material shall be specified as Trovidur Series 250, Type II, Grade I, PVC Class 14333-D, ASTM D-1784. Composition shall include inhibitor for UV radiation. A material sample coupon shall be submitted to the engineer for review with the bid package. **VIRON®** International PVC Duct meets or exceeds all of the above specifications.
- 3.2 Ductwork shall be fabricated, reinforced, installed, sealed and tested in accordance with requirements and recommendations of the SMACNA Thermoplastic Duct (PVC) Construction Manual.
- 3.3 The ductwork provided shall be manufactured by a firm with at least five (5) years of experience in similar type applications.
- 3.4 All the duct and duct components shall be manufactured by a certified fabricator and bear the "FM" label.

4.0 PRODUCT HANDLING

- 4.1** Storage - All ductwork material delivered to the job and not installed immediately is to be stored in a safe, dry location and protected against damage or loss.

5.0 DUCTWORK FABRICATION

5.1 Attachment of Reinforcement

- 5.1.1 Attachment of PVC reinforcement shall be by hot gas/filler rod welding. Solvent welding shall not be used. (See Figures 1, 2 and 3)
- 5.1.2 Where penetration of duct wall is approved, or specified, hardware shall be PVC encapsulated on inside of the duct, unless otherwise specified.
- 5.1.3 Where reinforcement is required on only two sides of duct, reinforcement shall terminate within a distance from edge of duct, equal to twice wall thickness.
- 5.1.4 Where reinforcement is required on all four sides of duct, it shall be full frame type with adjacent members lapped, and welded at corners. (See Figure 3)

5.2 Welding

- 5.2.1 Welding shall be done by hot gas fusion welding method utilizing PVC filler rod as manufactured for this purpose. Solvent welding shall not be used. (See Figure 5)
- 5.2.2 Welding shall be performed by workmen adequately trained in the art of PVC welding and certified in accordance with ASTM 1789 test methods.
- 5.2.3 Ductwork, hoods and similar air passage enclosures shall be finished completely air and water tight with smooth interior surfaces.
- 5.2.4 Ductwork shall be completely free from cracks, distortions or other imperfections.
- 5.2.5 The following table outlines minimum number of welding passes required:

TYPE OF WELDING

	Wall Thickness (Inches)	Rod Diameter (Inches)	Minimum # of Welding Passes
Longitudinal Seams	1/8	5/32	4"-12" Diameter Hand Welded-One (1)
	1/8	—	14"-22" Diameter Butt Welded
	3/16	—	24"-40" Diameter Butt Welded
	1/4	—	42"-72" Diameter Butt Welded
Circumferential Seams	1/8	5/32	Three (3) Hand Welded
	3/16	5/32	Three (3) Hand Welded
	1/4	5/32	Three (3) Hand Welded
<i>Note: Whenever possible, longitudinal and circumferential welds shall have one (1) interior weld sealing the seam in addition to outside welds, for maximum strength.</i>			
Ducts - Flanges and Reinforcing	1/8 3/16 1/4	5/32 5/32 5/32	Three (3) Three (3) Three (3)
<i>Note: Flanges to be back-welded a minimum of one (1) pass.</i>			

5.3 Longitudinal Seams

- 5.3.1 For thermally formed round duct sections, longitudinal seams shall be butt welded. (See Figure 6)
- 5.3.2 Alignment of longitudinal seams in adjacent butt welded sections of duct shall be avoided, and seams shall be staggered. (See Figure 11)
- 5.3.3 For straight rectangular duct, the corners shall be formed. Welded corner seams are not acceptable. (See Figure 4)
- 5.3.4 Longitudinal seams shall be butt welded and located at a distance of not less than 1/8 of the span width from corner of duct.

5.4 Elbows - Round Duct

- 5.4.1 Unless otherwise specified, centerline radius for standard elbows shall be 1.5 times diameter.
- 5.4.2 Segmented elbows shall be joined by butt welding and number of gores or segments shall be in accordance with table included herein.
- 5.4.3 Elbows may also be constructed by press forming in halves from a sheet. The halves shall then be joined by hot gas fusion welding method.

SEGMENTED ELBOWS

Duct Diameter or Width	Minimum Number of Segments	
	45 Degrees	90 Degrees
4 thru 8 inches	2	3
10 thru 48 inches	3	5
50 inches and above	4	7

5.5 Elbows - Rectangular Duct

- 5.5.1 Rectangular elbows shall be fabricated from flat stock with welded corner construction. (See Figure 4)
- 5.5.2 Unless otherwise specified, centerline radius for standard rectangular elbows shall be 1.5 times duct width.
- 5.5.3 Square throat elbows shall be provided with turning vanes.

5.6 Turning Vanes

- 5.6.1 Unless otherwise specified, turning vanes shall be constructed in accordance with the SMACNA Thermoplastic Duct (PVC) Construction Manual.

5.7 Offsets

- 5.7.1 Unless otherwise specified, centerline radii for standard offsets shall be the same as for elbows.
- 5.7.2 Where space limitations will not allow standard centerline radius offset, vane blades shall be installed to decrease turbulence.

5.8 Transitions and Reducers

- 5.8.1 Transition pieces in mains and sub-mains shall be tapered.
- 5.8.2 Unless otherwise specified, angular limitations for transitions illustrated in the thermoplastic duct construction manual shall be held where field conditions permit.

5.9 Branches Entering Main

- 5.9.1 Branch ducts shall enter main duct near large end of a transition, at an angle not exceeding 45 degrees wherever possible.

5.9.2 Branches shall not be positioned directly opposite one another on a main or a sub-main.

5.9.3 Intersection of branches with mains shall be continuously welded.

5.10 Transverse Joints

5.10.1 Transverse joints shall be made by either flanged method or bell and spigot method. Welded butt joints shall not be used.

5.10.2 Flanged Joints:

- a. Minimum dimensions of flanges for round and rectangular duct shall be in accordance with the SMACNA Thermoplastic Duct Construction Manual. (See Table 1)
- b. Where flange joints are used as reinforcement, their rigidity shall also be at least equivalent to that specified by the SMACNA Thermoplastic Duct Construction Manual. (See Figure 2)
- c. Spacing between flanges and/or equivalent reinforcement shall be as specified in the SMACNA Thermoplastic Duct Construction Manual.
- d. Flanges shall be welded to the end of duct on outside and inside of flange face, as shown in the SMACNA Thermoplastic Duct Construction Manual.
- e. Weld on flange face shall be ground flush with face of flange.
- f. Flanges shall be welded to duct in accordance with the SMACNA Thermoplastic Duct Construction Manual.
- g. Face of flange shall have no projections or depressions greater than 1/32" and shall be perpendicular to centerline of duct within 1/20".
- h. Unless otherwise specified, bolt size and spacing of bolt holes shall be in accordance with the thermoplastic duct construction manual. For rectangular duct, the first bolt shall be located a maximum of 1-1/2" from outside corner of reinforcement as illustrated in the SMACNA Thermoplastic Duct Construction Manual. Flat washers shall be used under both the nut and bolt head.
- i. Under non-corrosive external conditions, cadmium plated or suitable protected mild steel hardware may be used. In corrosive atmospheres, hardware for joining flanges shall be an appropriate type of stainless steel.
- j. Care shall be exercised in tightening of flange bolts so as not to overstress the PVC flange or its attachment to the duct.

- k. Flanged joints shall be provided with a gasket of suitable material which is compatible with the chemical environment and materials from which duct is made. After joint assembly, gasket material shall not protrude more than 1/8 inch beyond inside surface of duct, nor shall a cavity of more than 1/8 inch be formed below internal duct surface. Flange gaskets shall be of sufficient thickness to properly seal a joint, and shall be a minimum of 3/32 inch thick for duct dimensions up through 24 inches diameter, and 3/16 inch thick for duct diameters greater than 24 inches. Gaskets shall be of the full face type having an unbroken perimeter.

5.11 Duct Hangers and Supports

5.11.1 All duct supports (inside and outside) will be provided by others and are not a part of this contract.

5.12 Drains

5.12.1 Drains shall be full sized half couplings, not less than 1" diameter and suitable for receiving standard IPS pipe connections unless otherwise specified.

5.12.2 Fittings shall be continuously welded and trimmed flush with interior surface of duct.

5.12.3 Reinforcement plates shall be provided in the ductwork wherever necessary to insure rigid connection of drains.

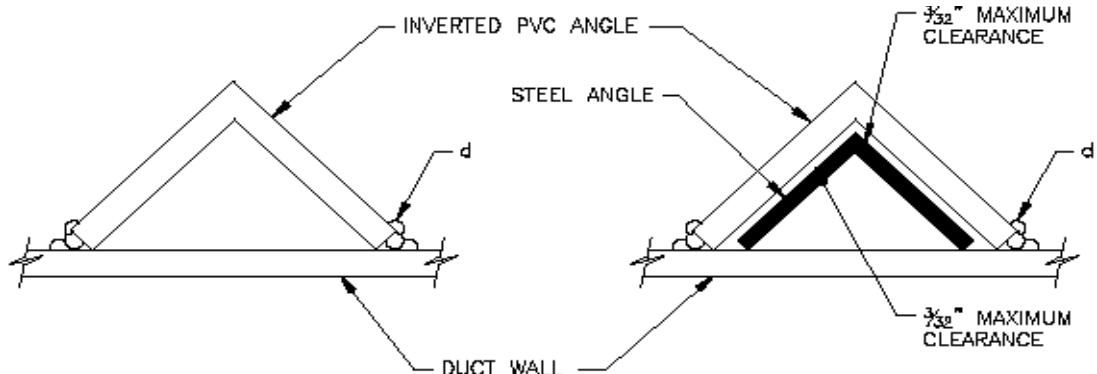

6.0 ACCEPTABLE MANUFACTURERS

- 6.1 VIRON[®] INTERNATIONAL CORPORATION**

- **LIMITED WARRANTY**

VIRON® INTERNATIONAL warrants to the dealers and owners its VIRON® products and parts to be free from defects in workmanship and material under normal use and services for one (1) year after the date of shipment by VIRON to the first retail purchaser or first user: if and only if VIRON® is notified in writing of the defect within fourteen (14) days from date that the defect is discovered. Written notice of defects discovered within the final fourteen (14) days of the warranty period must be sent to VIRON® via facsimile or first class mail prior to the expiration of the warranty period otherwise this warranty shall be void. Our obligation under this warranty is expressly limited to repairing or replacing at our option, without cost at our factory any part or parts therof which shall be returned to and received by VIRON® within such warranty period with transportation charges both to and from VIRON® prepaid, and which our examination shall disclose to our satisfaction to have been defective. In the event a defect is discovered within the final seven days of the warranty period, the returned goods must be received by VIRON® at VIRON®'s facility within seven days following expiration of the warranty period. Any request for repair or replacement should be directed to VIRON® INTERNATIONAL, Owosso, MI.

If examined equipment is found not to be defective or for some other reason not to be within the warranty coverage, seller's service time expended on and off location will be charged to the purchaser. This warranty gives you specific legal rights which vary from state to state. FAILURE TO PAY THE INVOICE IN FULL WILL RESULT IN VOIDING ANY AND ALL WARRANTIES.

- **LIMITATION OF WARRANTY AND LIABILITY**

This warranty does not apply to such VIRON® products and parts which in the sole judgment of VIRON® have failed as a result of faulty installation or abuse, or incorrect electrical connections or alterations, made by others, or use under abnormal operating conditions or misapplication of products and parts.

This warranty does not apply to damage resulting from shipment or storage of VIRON® products. Purchaser acknowledges that VIRON® products contain rotating parts that may be damaged by the forces of nature if not installed or put to their intended use within seven (7) days of delivery. THIS WARRANTY DOES NOT COVER COMPONENT PARTS THAT CARRY A SEPARATE WARRANTY FROM THE MANUFACTURER OF THE COMPONENT PART.

VIRON® will not approve for payment any repair made outside its factory without prior written consent of its Owosso, Michigan office. The foregoing shall constitute our sole and exclusive warranty and our sole and exclusive liability and is in lieu of all other warranties, whether written, oral, implied or statutory.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE PAGE HEREOF. SELLER DOES NOT WARRANT MERCHANTABILITY THAT SAID GOODS AND ARTICLES ARE OF MERCHANTABLE QUALITY, OR THAT THEY ARE FIT FOR ANY PARTICULAR PURPOSE.

The liability of any seller on any claim of any kind, including contract, warranty, tort, or negligence, for any loss or damage arising out of or connected with or resulting from the sale and purchase of products and parts covered by any VIRON® proposal, acknowledgement, order, or from the performance or breach of any contract pertaining to such sale or purchase, or from the design, manufacture, sale, delivery, resale, installation, technical direction in installation, inspection, repair, operation or use of any products or parts covered by any VIRON® proposal, acknowledgement, order or furnished by seller, shall in no case exceed the price as paid by purchaser allocable to the products or parts therof which give rise to the claim and shall terminate one year after shipment of said products and parts.

IN NO EVENT, WHETHER AS A RESULT OF BREACH OF CONTRACT, OR WARRANTY, OR TORT, OR ALLEGED NEGLIGENCE, DEFECTS, INCORRECT ADVICE OR OTHER CAUSES, SHALL SELLER BE LIABLE FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, including but not limited to loss of profits or revenue, loss of use of the equipment or any associated equipment, cost of removal or reinstallation or any cost associated therewith, cost capital, cost of substitute equipment, facilities or services, down time cost, or claims of customers of the purchase of such damages.

VIRON® neither assumes nor authorizes any person to assume for it any other liability in connection with the sale of its products and parts. Some states do not allow the exclusion or limitation of incidental or consequential damages, so all of the above limitations or exclusions may not apply to you.
